

MANAGED SECURITY

ONE SOURCE. ONE COMPANY. BUILT FOR PERFORMANCE. **BUILT FOR ENTERPRISE.**

PROTECTING YOUR NETWORK IS PROTECTING YOUR BUSINESS

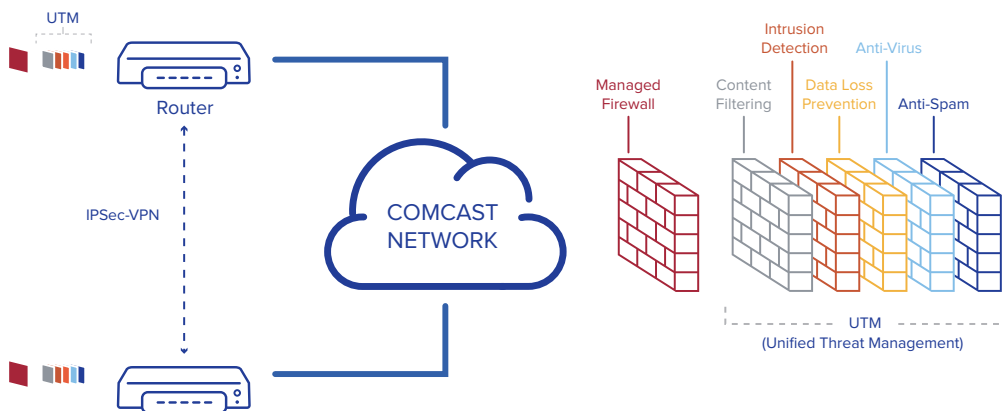

Information security professionals are facing an increasingly complex and dynamic threat landscape. Defense against cyber-attacks and internet based security threats have become a top strategic priority and the ability to simply shut down or block dangerous traffic at the source is no longer a viable solution. To build the business of tomorrow, the modern enterprise must implement and maintain a holistic view of network security.

- Helping to protect network entry points
- Encrypting data transmission
- Proactive monitoring and management

WE FACE THE SAME CHALLENGES

Comcast deals with these same threats faced by our customers. Every day we are challenged to operate and secure the nation's largest converged network for voice, video and data services – our own. As the modern enterprise grows and adapts, leveraging the latest in technological innovation, their security practices must evolve as well. Today, fierce competition is driving new trends in business that have the unfortunate consequence exposing networks to new risks.

- Expanding network perimeters
- Creating new points of entry
- Increasing user and app mobility

From end-to-end encryption and traffic segregation to customized firewall rules and proactive monitoring of equipment, Comcast Business offers an array of solutions that help you mitigate risk factors.

MANAGED SECURITY SERVICES

Comcast Business Enterprise Solutions can help you manage the seemingly overwhelming burden of implementing and maintaining an effective security posture. From end-to-end encryption and traffic segregation to customized firewall rules and proactive monitoring of equipment, Comcast Business offers an array of solutions that help you mitigate risk factors.

Managed Virtual Private Network (VPN)

- Provides a secure link for today's distributed enterprise
- Leverages security protocols to safeguard data (IPsec, SSL, TLS, SSTP)
- Comcast Business delivers the configuration, management and support

Managed Unified Threat Management (UTM)

- Robust functionality from a single device, eliminating the need for multiple systems
- Enhanced monitoring with greater visibility and computing resources
- On-premise equipment and high availability options

Managed Firewall

- Cost effective solution to help protect LAN from external internet based threats
- Firewall configuration
- Customized firewall rules based upon specific needs
